Acknowledgements

Firstly I would like to express my thanks to Raymond R. Newell of the *Rijksuniversiteit Groningen*, whose advice and priceless humour were a great support during all those years I worked on this research. My friend and colleague Juliëtte M. Pasveer has spent many days in St. John's, Newfoundland, recording skeletal data and answered most of my questions on physical anthropology, for which I am very grateful. Trinette S. Constandse-Westermann, and Verner Alexandersen (*København's Universitet*), were very helpful giving advice on physical anthropological and dental matters respectively.

Of course this research would not have been possible without the efforts of the people of the Archaeology Unit of Memorial University of Newfoundland, I express my thanks to Sunny M. Jerkic whose enthusiastic cooperation was highly appreciated. I also thank Jim A. Tuck for providing unpublished data and slides, and Priscilla M.A. Renouf whose invitation to work with her on the excavations of the Port au Choix Palaeo-Eskimo houses, in 1990, got me interested in the fascinating archaeology of this area. I am grateful to the people of the Newfoundland Museum who let me study the Port au Choix artifact collections, and the Department of Tourism and Culture of the Government of Newfoundland and Labrador who gave permission to sample some of the oldest pieces of their cultural heritage. Stacey Girling and Benoit Theriault of the Canadian Museum of Civilization were very helpful as well. The permission granted by the late J.E. Anderson to use unpublished records of his physical anthropological investigations, and the mediation of S.R. Saunders of McMaster University, London, Ontario, certainly need to be acknowledged here. Very useful were discussions with other archaeologists working in the northeast of North America, especially with Bruce Bourque of the Maine State Museum, Augusta, Maine, Stephen Davis of St. Mary's University in Halifax, and Brian Robinson of the University of Maine at Farmington.

I thank Robert E.M. Hedges of the Research Laboratory for Archaeology and the History of Art and Bryan C. Sykes working at the Institute of Molecular Medicine, both Oxford University laboratories, who I met at the first Ancient DNA conference in Nottingham in 1991, and who agreed to step into the 'Port au Choix project'. I am grateful that they let me work in their laboratories to make some contributions to the enormous task on the analysis of 64 ancient bone samples. Most of this work however was carried out by my friends Martin B. Richards, and especially Jill F. Bailey (Institute of Molecular Medicine), who suffered so many frustrations but never gave up. The cooperation of Michael Richards (Research Laboratory for Archaeology and the History of Art) with regards to the stable isotope analyses was very much appreciated. Part of the DNA results were

reproduced by the laboratory of Bill Hauswirth at Gainesville, University of Florida for which I am grateful as well.

The help of my *promotores* Reinder H. Reinders, and J.H.F. Bloemers and *paranimfen* Carla Jelsma and Caroline Tulp was very much appreciated, as was the effort of the other people that read and commented earlier versions of this thesis. These are Gert-Jan Bartstra, R.M.A. Bedaux, Sytze Bottema, Erik Drenth, Sunny Jerkic, Margaret van der Kamp, Marcel Niekus, Juliette Pasveer, Priscilla Renouf, Jim Tuck, Caroline Tulp and G.N. van Vark. Special notice must be made of the extensive work of Trinette S. Constandse-Westermann and Raymond R. Newell, who took great efforts to edit and comment a number of earlier versions of the manuscript. Their critical contribution greatly improved the text. Of course only the author is responsible for the final result.

The illustrations, with which I am very pleased, were made by Katherine Scott and Geert Delger. The attractive cover was designed by Gert van Oortmerssen. Indispensable was the help of Mr. A. Polman of the *Universiteits Bibliotheek Groningen*, who was able to locate and borrow most of my requested books from libraries all over the world. The radiocarbon dates and a number of the stable isotope determinations were conducted by the *Centrum voor Isotopenonderzoek* of the *Rijksuniversiteit Groningen*. I would like to thank J. van der Plicht and Mrs. A. Aerts-Bijma of this institution for their kind cooperation.

I also want to thank to following institutions who have made financial contributions, in money or consumables, to this project; the *Glavimans Stichting*, the Institute of Social and Economic Research (ISER) of the Memorial University of Newfoundland, the *Prins Bernhard Fonds*, the *Stichting Nederlands Museum voor Anthropologie en Praehistorie*, the *Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO)*, and the two contributing laboratories of Oxford University; the Research Laboratory for Archaeology and the History of Art and the Institute of Molecular Medicine.

Most grateful I am to my parents who gave me the opportunities to study and who supported me in many other ways and I thank Margaret who always believed in this project.

Groningen, February 2000
